

HIROFUMI INAGUMA

Research building #7, Room #417, Yoshidahonmachi, Sakyo-ku, Kyoto, 606-8501, Japan

Phone (office):(+81)-75-753-5992 ◇ (mobile): (+81)-80-6967-1623

E-mail (office): inaguma [at] sap.ist.i.kyoto-u.ac.jp / (private): hiro.mhbc [at] gmail.com

RESEARCH INTERESTS

Automatic speech recognition (ASR)

- End-to-end speech recognition
- Multilingual end-to-end speech recognition
- Language modeling
- Transfer learning, domain adaptation, pre-training

Speech translation

- End-to-end speech translation
- Multilingual end-to-end speech translation

EDUCATION

Ph.D. in Computer Science, Kyoto University, Kyoto, Japan

April 2018 - Present

Department of Intelligence Science and Technology, Graduate School of Informatics

- Supervisor: Prof. Tatsuya Kawahara

M.Sc. in Computer Science, Kyoto University, Kyoto, Japan

April 2016 - March 2018

Department of Intelligence Science and Technology, Graduate School of Informatics

- Thesis title: Joint Social Signal Detection and Automatic Speech Recognition based on End-to-End Modeling and Multi-task Learning

- Supervisor: Prof. Tatsuya Kawahara

B.Sc. in Computer Science, Kyoto University, Kyoto, Japan

April 2012 - March 2016

- Supervisor: Prof. Tatsuya Kawahara

WORK EXPERIENCES

Microsoft Research, Redmond, WA, USA

July 2019 - October 2019

Research Internship (3 months)

- Mentor: Dr. Yifan Gong, Dr. Jinyu Li

Johns Hopkins University, Baltimore, MD, USA

July 2018 - September 2018

Visiting student (2.5 months)

- Worked on end-to-end speech recognition and translation

- Participated in the JSALT workshop (topic: multilingual end-to-end speech recognition)

- Participated in the IWSLT2018 evaluation campaign on the end-to-end speech translation track

- Mentor: Prof. Shinji Watanabe

IBM research AI, Tokyo, Japan

September 2017 - November 2017

Research Internship (2 months)

- Worked on end-to-end ASR systems

- Mentor: Dr. Gakuto Kurata, Dr. Takashi Fukuda

Recruit Co.,Ltd., Tokyo, Japan

February 2017

Research Intern (2 weeks)

- Worked on data analysis and image classification competition

- Won the 1st place

TECHNICAL STRENGTHS

Programming language	Python, Bash, C/C++, Java, LaTeX, PHP, Javascript, CSS, HTML
Software & Tools	ESPnet, Kaldi, Docker
Deep learning frameworks	Pytorch, Tensorflow, Chainer

LANGUAGE SKILL

Japanese (native), English (fluent)

AWARDS

Microsoft Research Asia Ph.D. Fellowship Award, from Microsoft Research Asia (MSRA), October 2019

Yamashita SIG Research Award, from Information Processing Society of Japan (IPSJ), March 2019

- Paper title: "An End-to-End Approach to Joint Social Signal Detection and Automatic Speech Recognition"

Yahoo! JAPAN award (best student paper), from SIG-SLP, June 2018

Research Fellowship for Young Scientists (DC1), from Japan Society for the Promotion of Science (JSPS), April 2018 - March 2021

Student award, from the Acoustical Society of Japan (ASJ), March 2018

Student award, from the 79th of National Convention of Information Processing Society of Japan (IPSJ), March 2017

RESEARCH PROJECTS

Multilingual end-to-end speech translation

Proposed an effective framework for the multilingual end-to-end speech translation based on a single sequence-to-sequence model, and showed significant improvements of the translation performances compared to the conventional bilingual models.

Multilingual end-to-end speech recognition with language model

Developed the language-independent end-to-end ASR system based on a single sequence-to-sequence model, and successfully adapted to unseen languages with the external language model.

Acoustic-to-word sequence-to-sequence speech recognition without out-of-vocabulary (OOV) words

Proposed a sequence-to-sequence ASR framework which directly outputs words, and resolved the data sparseness and unknown words (UNK) problems by multi-task learning with the character-level ASR task. Character-level hypotheses are also leveraged during the inference stage to recover OOV words.

Joint social signal detection and automatic speech recognition

Incorporated social signal detection (e.g., laughter, filler, back-channels, and disfluencies) into the end-to-end ASR task, and proposed a unified framework for jointly modeling both tasks.

PUBLICATIONS (REVIEW PAPER)

Hirofumi Inaguma, Kevin Duh, Tatsuya Kawahara, and Shinji Watanabe, "Multilingual End-To-End Speech Translation", IEEE ASRU, 2019 (To appear). (Acceptance Rate: $144/299=48.1\%$)
